

# Algorithms for Non-Linear Programming

This repository contains implementations of various algorithms for solving non-linear programming problems.

## Getting Started

Install Python 3.10

```
sudo apt-get install python3.10-full
```

Install Venv Package

```
sudo apt-get install python3-venv
```

Create a virtual environment

```
python3.10 -m venv env
```

Activate the virtual environment

```
source env/bin/activate
```

Install the required packages

```
pip install -r requirements.txt
```

## How to Use

Run the specific problem script, for example:

```
python problem1.py
```

or run the main script to execute all problems:

```
python run_all_problems.py
```

To convert the markdown file to a PDF, use the following command:

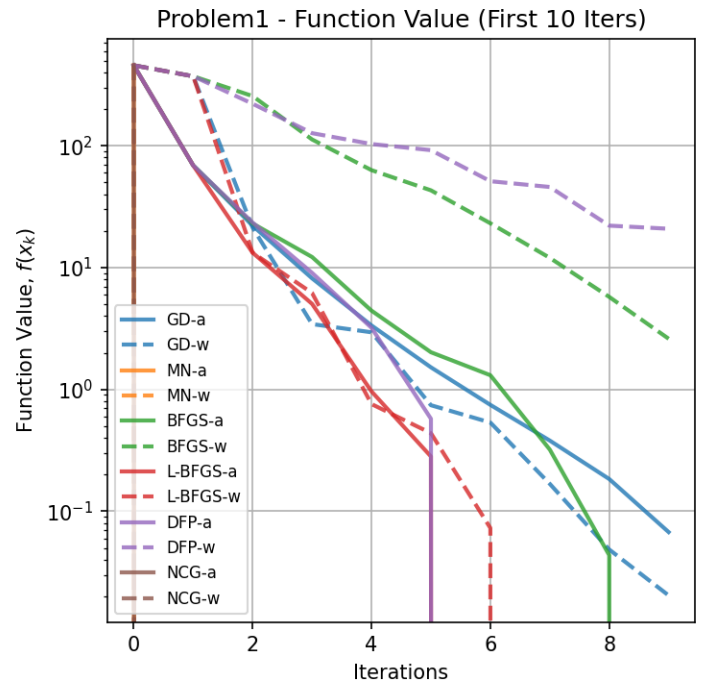

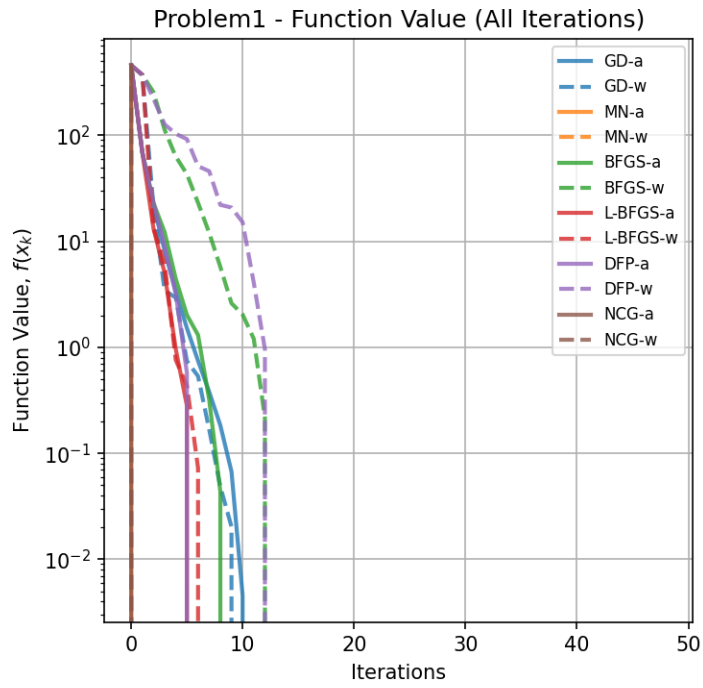

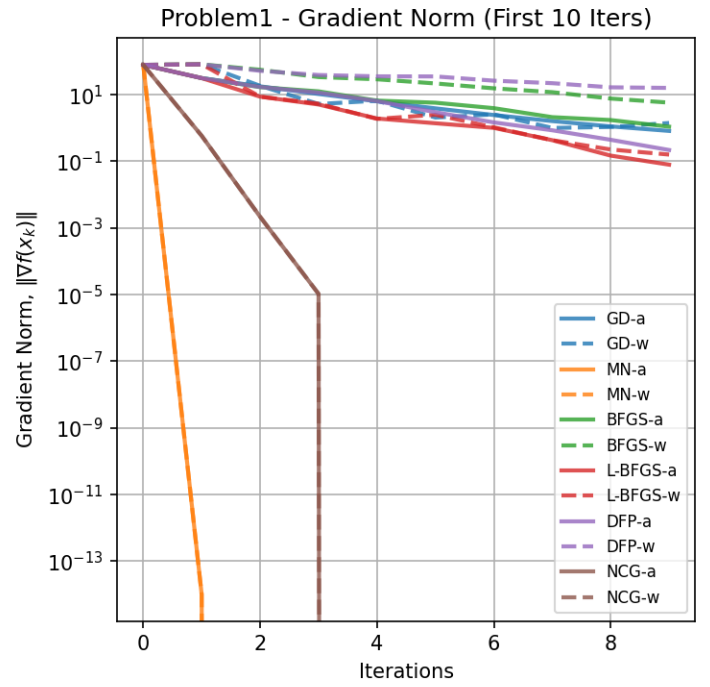

```
pandoc README.md -o README.pdf -V geometry:margin=0.5in
```

## Results

Plots for each problem will be saved in the **figures** directory. Data for each problem will be saved in the **data** directory.
